

iAssets

iFIT™ FOR ASSET TRACKING

Instantly track and manage your organisation's assets while securing an infrastructure platform for records and inventory management.

A part of 6PM's iFIT™ (Intelligent File and Inventory Tracking) multi-purpose platform solution, iAssets is the application that uses a combination of passive (RFID) and active (RTLS) tagging to track and manage mobile medical devices and physical assets. Wheelchairs, beds, pumps, recorders, scanners, monitors and more can be tracked and maintained.

Each year hospital employees waste valuable hours searching for missing or underutilised equipment, costing the healthcare sector millions. The implementation of asset tracking infrastructure mitigates this, leveraging the trust's investment, improving the utilisation and operational performance of essential equipment. With iAssets this is simple.

iAssets allows organisations to keep track of their individual assets in a large multi-storey site without having to anchor the user to a desktop. Through the use of **"Untethered Tracking"** iAssets eliminates desktop use and provides users with the freedom to move and track any item from anywhere.

iAssets is designed to manage the complete lifecycle of particular assets, track their location to ensure they are not missing or stolen, and ensure upgrades and system deployments run efficiently.

How the solution works:

Location / Movement Tracking

Provides details on asset location and movement history.

Mobile Inventory Tracking

Uses handheld devices, fixed read points, or computer workstations to modify asset information and more.

Software Application

The iAssets application is comprehensive and simple to use.

HOW WILL iASSETS BENEFIT MY ORGANISATION?

Cost Reduction: Optimise asset utilisation, reduce capital expenditure on excess procurement of replacement assets and rental, lower labour costs

Improved Efficiencies: Less staff time wasted, increased retrieval accuracy, reduction of data entry errors and automated data collection to provide real-time monitoring

Increased Visibility: Gain greater insight into key aspects of your organization

Features

iAssets caters for a variety of physical asset tracking and management requirements by:

- Centralising location information for medical devices
- Reducing manual effort in the overall management of medical device equipment
- Improving information governance
- Supporting the management of third party maintenance contracts
- Providing a full electronic audit trail of each asset assigned

iAssets can be deployed as a standalone solution or with other iFIT applications sets such as iRecords, iWorkforce and more.
