

iEDM

iFITTM iRECORDS ADD-ON FOR TRACKING ELECTRONIC FILES

An EDMS connector that allows the trust to manage both physical and scanned electronic files through the same portal.

In line with the NHS target of going paperless by 2020 many trusts are in the process of digitising their paper based records. As a consequence, these trusts are now in a position where they may require both paper and electronic files to get a holistic view of a patient's case notes. As part of the iFITTM records management application (iRecords), 6PM has now introduced iEDM, an add-on which allows users to integrate iRecords with their electronic document management repository.

Through iEDM every iRecords user will be able to see which records (or parts of records) remain on paper and their location as well as records that have now been digitised.

This approach allows iRecords to address scanning pain points such as CAS cards, in smaller tactical deployments, while also being capable of interfacing with any available trust-wide EDMS.

Why upgrade your system with iEDM?

As an add-on to the iRecords application, iEDM provides a low cost and effective solution to either address specific scanning pain points or integrate seamlessly with the trust's EDMS while they gear up to go paperless.

KEY FEATURES AND BENEFITS

Improved patient safety

- provides staff with a complete and up to date view of the patient's holistic medical record across all media

Does not require any on-site deployment

- Simply a plug-in to iRecords

Eliminates need to implement further systems

- iRecords together with iEDM provides the holistic view

Improves a trust's understanding of its patient files maintained in physical storage

- Provides intelligence to assist trusts decide what to scan, file, destroy or send to storage
- Reduced costs associated with file storage

The screenshot displays the iRecords application interface. At the top, there is a navigation bar with tabs for 'iRecords' and 'iAssets', and a user profile for 'Elena Krajcheva'. Below the navigation bar is a toolbar with icons for Home, Tagging, Reports, Create, My Requests, Process Requests, Clinical Prep, Offsite Storage, File Audit, and Admin. The main content area is titled 'Search Result' and features a toolbar with buttons for Track, Missing, Destroy, Print, Request, and Batch. Below this are buttons for 'RETURN TO SEARCH', 'SELECT ALL', and 'SELECT ALL DISPLAYED', along with a 'Show Active Only' checkbox. The search results are presented in a table with columns for 'Icon', 'Description', and 'Location'. Two results are shown: one for a CAS CARD and one for a GENSET. Each result includes a checkbox, an icon, a detailed description with patient information (RFID, Doc Type, NHS Number, BARCODE, MRN, First Name, Last Name, Volume Type, Client Note, File Note), and a location. The table also includes a 'History' button for each result. At the bottom of the table, there are navigation controls for 'Items per page' and '1 - 2 of 2 items'. The footer of the application includes the 6PM logo, version information (iFIT Version 2.04, Build Version: 2.4.3.29156, Database Version: 2.04.03.20), and the logo for The Michelangelo Hospital NHS Trust.

The existing search capabilities of iRecords will be updated to return both the physical and electronic files related to a patient. Electronic files are displayed as hyperlinks and will open in the EDM's document viewer.
