

iFIT Tag Service

6PM'S GS1 COMPLIANT RFID TAG
PRINTING AND DELIVERY SERVICE

Ensure the smooth running of your system by having working RFID tags directly delivered on time by 6PM.

Maintaining an adequate stock of RFID tags for the iFIT system is ultimately the responsibility of the department head, be it Medical Records, Engineering or Estates. 6PM recognises however that we can assist with this process. That is why we provide a service to help ensure that your stock of RFID tags does not shrink to levels where the seamless working of your department is negatively impacted.

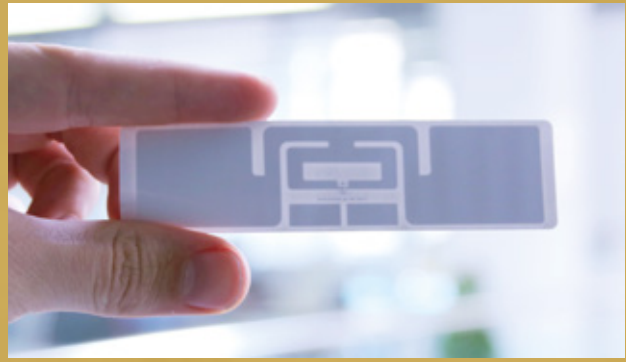

6PM encodes and prints ready-to-use RFID adhesive tags to suit every item catered by our systems. This includes case notes, medical devices and other hospital assets. Our Tag Service is directly integrated to our iFIT operations in order to reduce the costs of designing and producing RFID labels – allowing us to pass on our savings to you, and save you the headache of dealing with unresponsive third parties.

Now 6PM can take care of the entire process; from receipt of order through to delivery. Simply contact us, place your order and we'll produce your tags and have them directly delivered to you on time.

RFID

The RFID tag on the back of the label is associated with the relevant key in the iFIT database and allows the label to be read by sensors.
