iReach

iReach for Lilie

Lilie

Real-time powerful data quality and information management tool for sexual health services.

Our solution consists of a powerful configurable dataset and dashboard capability for Lilie. The end result is instantly accessible data, available for the executive team and information analyst.

iReach provides data that's accurate, consistent and complete. It is an information management tool, built hand-in-hand with NHS trusts specifically for sexual health. iReach is fully configurable through its ergonomic graphical interface and with great flexibility data can be processed to produce trusted superior data from any source regardless of size, data format, platform or technology.

6PM GROUP

We understand your challenges

Daily, information departments and management teams across the globe encounter a multitude of problems related to revenue loss and leakage. These are often caused by missing, incorrect, misplaced or irregular data.

As a result, standard reports to the management and similar submissions are regularly late, inaccurate and often require multiple resources working on them at the eleventh hour. This requires numerous resources dedicated to analysing, fixing and correcting data manually, potentially without any auditing.

iReach not only offers a solution to these problems but also provides many additional benefits.

Benefits

Instant visibility of data sets which can be made available on demand

Highly comprehensive and flexible reporting

Reach different stakeholders within the organisation with graphical and tabular-based reports

Improve your accuracy of sexual health data and reporting

Save time through automated process flows

Improve confidence in data via a holistic approach to data integrity including full auditing functionality

Collate sparse data sources into accurate and instantly usable information

Lower maintenance costs via administration tools and dashboards

How does iReach work?

iReach for Lilie is a powerful preconfigured data management engine that automatically receives and processes data from the Lilie database at prescheduled intervals. From this data, iReach then produces reports and dashboards that allow the business managers and clinicians to manage the delivery of the service more effectively. In addition, the data is reconstituted in a way that is easy for non-technical users to build new reports or dashboards using the standard tools provided.

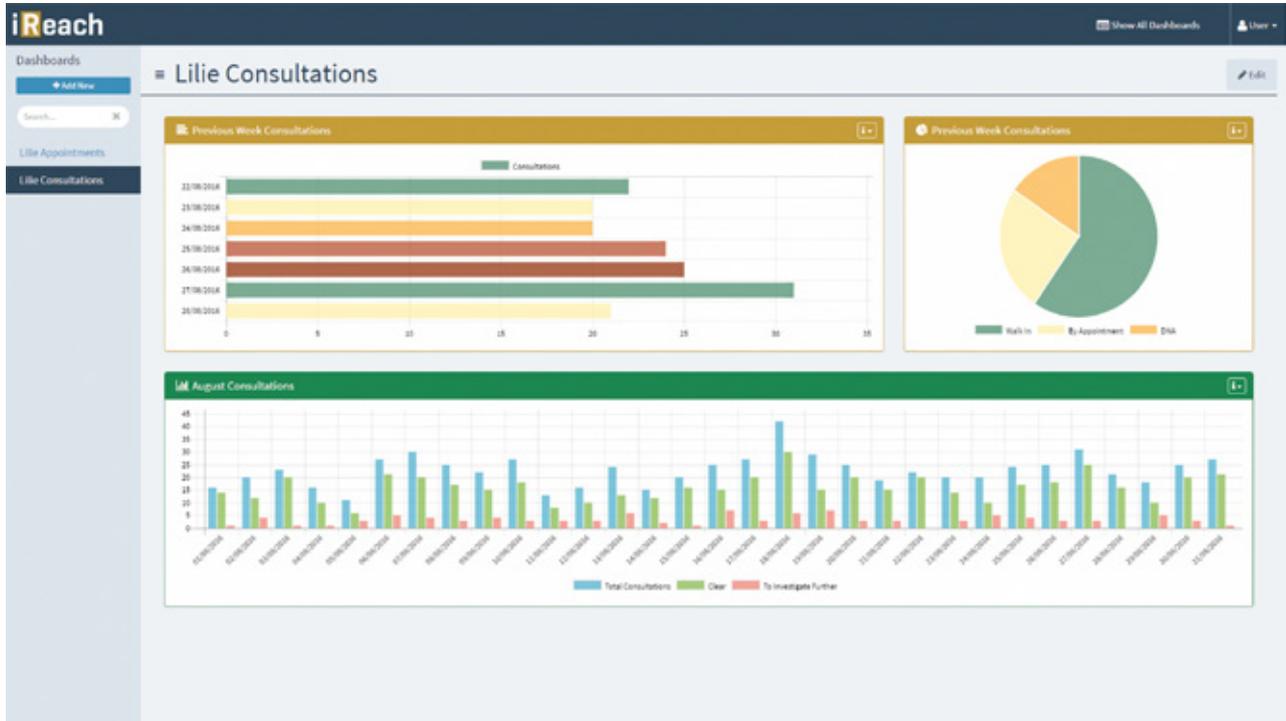

Tabular Reporting

The solution offers a simplistic way of reporting on your information. iReach prepares your information and also presents a module for analysis. A simple information querying interface lets you drag and drop data fields onto a canvas to shape your outputs. These are presented in a user friendly manner to make the process as easy and painless as possible. Functions are also available to help you get aggregates, sums, averages and more.

Dashboards

In addition to the standard reporting, this solution provides the option to display the information as real-time dashboards. This will enable senior management to monitor areas throughout the day, via regularly updated pie charts, bar graphs, line graphs and other various options. These can also be viewed on mobile devices for continuous access even when on the move.

GROUP

Instant reporting and data availability

The reporting structures are coupled with comprehensive pre-configured data quality checks to ensure that the information produced is reliable and available.

Additional functionality

In addition to its core features, iReach offers the possibility to send automated emails and SMS texts as part of the workflows, generate personalised exports and transfer data between systems. Data imports can be controlled through additional inputs, whereas the system can be monitored at a glance through a real-time system administration dashboard.

iReach by 6PM is the perfect solution to complement your Lilie implementation if you're looking for further insights into the performance of your service.
